Title	Freezing of the Bukvoed website when ordering a negative quantity of goods
Steps	1. Add book to cart (https://www.bookvoed.ru/my/cart/ishop). 2. Enter the quantity of goods "-111111111111", save changes.
Actual result	The site freeze (see the screen "Freeze with logged in user.jpg", "Freeze with unauthorized user.JPG").
Expected result	Prohibit entering nonsense, change the quantity of goods to zero, zero the order value and indicate, for example, the minimum order value (see the screen "Zeroing the quantity of goods.jpg").
Additional Information	The error is reproduced when a negative eleven-digit number is specified in the "quantity of goods" field, regardless of whether the user is authorized (login ukos81, password 123456789) or not. When specifying the real quantity of goods (for example, 3) or -1, no error occurs. Despite the fact that the user is unlikely to indicate such a quantity of goods when placing an order, it is better to display the message "data entry error" when entering incorrect data and reset the incorrect quantity of goods.
